

A giant hyper-realistic statue based on the given photo, keeping the original face of the boy exactly the same. The statue is placed in the middle of a large roundabout in Bangalore, near a famous historical landmark. The statue is 90% completed: most of its structure is finished, while the remaining 10% is still under construction, with scaffolding around it. Construction workers in yellow helmets and orange safety vests are welding, climbing, and working on the unfinished sections. Some exposed metal framework is visible on the incomplete part. The boy in the statue is sitting casually on top of a massive glowing thick 3D Instagram logo structure. The Instagram logo is hollow and futuristic, made of a shiny metallic silver frame with brightly glowing neon pink light running through it on all of its edges. The logo consists only of two separate standalone shapes: an outer rounded square metallic frame that is firmly standing upright on the ground and a smaller metallic circular frame suspended inside it, both glowing brightly in neon pink, with no connecting parts between them. The empty space inside the logo makes it look open and hollow. boy sitting confidently cross-legged on the edge of the glowing Instagram logo. The environment should be a bright day.
